

Inflation Multi-Asset Fund

E CLASS ACCUMULATION SHARES

Fund Description

The investment objective of the Fund is to preserve the real value of capital through prudent investment management. The Fund will be managed actively and will predominantly invest in a diversified portfolio of inflation-related assets.

The Inflation Multi-Asset Fund is a comprehensive real return asset allocation solution designed to hedge global inflation risks while targeting enhanced after inflation return. It invests actively in global inflation-linked bonds, commodities, emerging market (EM) currencies, real estate and gold. In addition, tail risk hedging strategies are used to limit the impact of periodic market stresses that may affect inflation-related assets.

The potential benefits of the Inflation Multi-Asset Fund include:

- * Strategic allocation to a comprehensive set of real assets, enhanced by active management of these assets.
- * Portfolio diversification relative to a traditional portfolio comprising stocks and bonds
- * Robust risk diversification and management, including strategies to explicitly hedge against systemic market risks

The Fund may use or invest in financial derivatives.

The fund combines top-down macroeconomic views from PIMCO's Global Investment Committee and Asset Allocation Committee with bottom-up relative value ideas from the specialist Real Return team

ABOUT THE BENCHMARK

The benchmark is a blend of 45% Bloomberg Global Inflation Linked 1-30yrs Index (USD hedged), 15% JPMorgan Emerging Local Markets Index Plus (Unhedged), 20% Bloomberg Commodity Total Return Index, 10% FTSE NAREIT Global Real Estate Developed Total Return Index (USD unhedged) and 10% Bloomberg Gold Subindex Total Return Index (USD Hedged). The Bloomberg Global Inflation Linked 1-30yrs Index measures the performance of the major developed market government inflation-linked bond markets. It is market capitalization weighted and includes maturities up to 30 years. JPMorgan Emerging Local Markets Index Plus tracks total returns for local currency-denominated money market instruments in 24 emerging markets countries. The Bloomberg Commodity Total Return Index reflects the return on fully collateralized positions in the underlying commodity futures of a number of physical commodities. The index is designed to be a highly liquid and diversified benchmark for commodities as an asset class. The FTSE NAREIT Global Real Estate Developed Total Return Index is a free-float adjusted, market capitalization-weighted index designed to track the performance of listed real estate companies worldwide. The Bloomberg Gold Subindex Total Return Index reflects the return on fully collateralized positions in the underlying commodity futures. It is not possible to invest in an unmanaged index

Unless otherwise stated in the prospectus, the Fund is not managed against a particular benchmark or index, and any reference to a particular benchmark or index in this factsheet is made solely for risk or performance comparison purposes.

⊕Yields reported gross of fees, the deduction of which will reduce the yield. Yields are reported in the base currency of the fund and are not specific to the share class. PIMCO calculates a Fund's Estimated Yield to Maturity by averaging the yield to maturity of each security held in the Fund on a market weighted basis. PIMCO sources each security's yield to maturity from PIMCO's Portfolio Analytics database. When not available in PIMCO's Portfolio Analytics database, PIMCO sources the security's yield to maturity from Bloomberg. When not available in either database, PIMCO will assign a yield to maturity for that security from a PIMCO matrix based on prior data. The source data used in such circumstances is a static metric and PIMCO makes no representation as to the accuracy of the data for the purposes of calculating the Estimated Yield to Maturity. The Estimated Yield to Maturity is provided for illustrative purposes only and should not be relied upon as a primary basis for an investment decision and should not be interpreted as a guarantee or prediction of future performance of the Fund or the likely returns of any investment.

Source: PIMCO, index provider for benchmark data.

PIMCO duration calculation that adjusts the durations of credit securities to account for the potential that in the event of default investors will receive the recovery amount prior to the maturity of the security.

Differences in the Fund's performance versus the index and related attribution information with respect to particular categories of securities or individual positions may be attributable, in part, to differences in the pricing methodologies used by the Fund and the index.

Dividend is not guaranteed. Past distributions are not necessarily indicative of future trends, which may be lower. A positive distribution yield does not imply a positive return. Data does not include special cash dividends. Distribution payments of the Fund where applicable, may at the sole discretion of the Fund, be made out of either income and/or capital of the Fund. In the case of the Fund and the Income II Shares, the Fund may at its discretion pay dividends out of capital and charge management fees to capital, thereby resulting in an increase in distributable income available for the payment of dividends by the Fund/Income II Shares and therefore, the Fund / Income II shares may effectively pay dividends out of capital. In the case of Income II Shares, the Fund may also charge other fees to capital and also take into account the yield differential arising from share class currency hedging (which constitutes a distribution from capital). This may result in an immediate reduction of the NAV per share for the Fund and the Income II Shares. Please refer to www.pimco.com/sg/en for more information on income statistics.

Negative allocations may result from derivative positions and unsettled trades and does not imply the fund is short cash, is levered, or that the derivatives are not fully cash backed. Duration is the sensitivity of a fixed income security to a change in interest rates. The longer the duration of a fixed income security, the higher its sensitivity to interest rates. Duration Weighted Exposure (DWE%) is the percentage weight of each sector's contribution to the overall duration of the fund. Morningstar ratings are shown for funds with 4 or 5 star ratings only. Other share classes ratings are either lower or unavailable. A rating is not a recommendation to buy, sell or hold a fund. Copyright © 2026 Morningstar, Inc.

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. **Past performance is no guarantee of future results.** Investment involves risk including possible loss of the principal amount invested.

Average Credit Quality (ACQ) - Average Credit Quality (ACQ) is calculated by PIMCO using an internal proprietary calculation methodology and ranges from AAA (highest) to D (lowest); the portfolio contained herein is not reflective of individual ratings by an independent rating agency. ACQ is a market-weighted average of the credit ratings of the credit instruments and holdings which create bilateral counterparty risk, excluding equities and certain other instruments. In calculating the ACQ of a portfolio, PIMCO generally uses the highest of the ratings of S&P, Moody's or Fitch assigned to each issuer held by the portfolio. If an issue or issuer is unrated, it is generally assigned a rating by PIMCO. A significant portion of a portfolio's ACQ may be derived from ratings assigned by PIMCO. ACQ is calculated on a daily basis for each portfolio and will change over time as the ratings for individual securities held in the portfolio change or as instruments are added and removed from the portfolio. In general, instruments are weighted at their market value. Certain derivatives, such as credit default swaps, are weighted at "bond equivalent value," which is the notional amount of the instrument adjusted by the current gain or loss on the position. Certain unrated instruments are not assigned a rating by PIMCO (such as OTC Credit Spreads, Money Market futures, Equity futures, and common stock) and are excluded from the ACQ calculation. This could lead to an under-estimation and under-statement of the credit risk of a portfolio. The portfolio itself has not been individually rated by an independent rating agency. The credit quality of a particular security or group of securities does not ensure the quality, stability or safety of the entire portfolio. PIMCO-assigned ratings used in the calculation may not be representative of PIMCO's current views should the security review have occurred on a date other than the date that this calculation was generated, which will generally be the case, or should an event that could affect a credit rating have occurred. The Fund may use or invest in financial derivative instruments and be subject to various risks (including for e.g. liquidity risk, interest rate risk, market risk, credit risk and management risk etc.) associated with such investments in financial derivative instruments. A Fund's use of, or investment in, financial derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Participation in the markets for financial derivative instruments involves investment risks and transaction costs to which a Fund may not be subject if such strategies are not used. You should carefully consider these risks prior to making an investment in the relevant Fund. Please refer to the Singapore prospectus for more information.

Investment involves risk including possible loss of the principal amount invested. Past performance is not a guarantee or a reliable indicator of future results and no guarantee is being made that similar returns will be achieved in the future. The value of shares of the Fund and the income accruing to them, if any, may fall or rise. Investment returns denominated in non-local currency may be exposed to exchange rate fluctuations. In an environment where interest rates may trend upward, rising rates will negatively impact most bond funds, and fixed income securities held by a fund are likely to decrease in value. Bond funds and individual bonds with a longer duration (a measure of the expected life of a security) tend to be more sensitive to changes in interest rates, usually making them more volatile than securities with shorter durations. Investors should consider the investment objectives, risks, charges and expenses carefully before investing. This and other information is contained in the Fund's Singapore Prospectus which is available and can be obtained from our website www.pimco.com/sg/en, a Fund distributor or the Singapore Representative. Prospective investors should read the Fund's Singapore Prospectus before deciding whether to subscribe for or purchase shares in any of the Funds. Investors may wish to seek advice from a financial adviser before making a commitment to invest and in the event you choose not to seek advice, you should consider whether the investment is suitable for you.

PIMCO Funds: Global Investors Series plc is an open-ended investment company with variable capital and with segregated liability between Funds incorporated on 10 December, 1997 and is authorised in Ireland by the Central Bank as an undertaking for collective investment in transferable securities pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 (S.I. No. 352 of 2011) as amended. PIMCO Funds: Global Investors Series plc has appointed PIMCO Asia Pte Ltd as the Singapore Representative. This document is issued by PIMCO Asia Pte Ltd (8 Marina View, #30-01, Asia Square Tower 1, Singapore 018960, Registration No. 199804652K).
